

NEW BABY IMMUNISATIONS

The UK immunisations have been revised in 2016 to include new vaccines. This is to give your child the best available protection against serious vaccine preventable diseases.

There are other vaccines that are equally beneficial but are not currently included in the UK routine schedule. Some are already included in the routine immunisation in other countries. These vaccinations are available in the UK on request and therefore it is worth discussing with me. The information underneath is to help you with making an informed choice.

Routine UK Vaccinations ■	Vaccinations	Date
■ Birth	<ul style="list-style-type: none"> • BCG (London) • Hepatitis B¹ vaccine 	
4 Weeks (1 Month)	<ul style="list-style-type: none"> • Hepatitis B² (2nd dose)
